PROFILE

AI/ML Engineer and Full-Stack Developer with strong expertise in building real-world intelligent systems across healthcare, traffic optimization, and predictive analytics. Experienced in developing end-to-end AI pipelines, scalable backend architectures, and user-focused applications. Proven track record of 50+ hackathons, national-level wins, and leading a 100+ member AI community (TechNeekX). Passionate about building impactful, production-ready AI solutions.

EDUCATION

B.Tech – Computer Science & Engineering (Artificial Intelligence)

2024 – 2028 (Expected)

Babu Banarasi Das University, Lucknow | CGPA: 7.5

EXPERIENCE

Founder

2025 – Present

TechNeekX

- Built and scaled a tech ecosystem with 100+ active members focused on AI innovation and development.
- Led execution of 4+ large-scale events including InnVedX, Kalpathon 2.0, and Vibe Designing.
- Designed structured hackathon workflows including GitHub-based submissions, mentorship cycles, and time-bound evaluation systems.
- Managed partnerships, community growth, and cross-functional collaboration across tech and operations.

Python Developer Intern

Dec 2025 – Mar 2026

Woject Technologies

- Developed backend automation and modular Python solutions for real-world applications.
- Worked on performance-driven problem solving under production-like constraints.
- Contributed to scalable and maintainable system design.

Python Developer Intern

Apr 2026 – May 2026

QSkill

- Built data-driven Python workflows and backend logic.
- Improved system efficiency through structured coding and optimization approaches.

PROJECTS

FractureVision-AI — AI-powered medical imaging system for fracture detection using deep learning

- Implemented EfficientNet-based classification with Grad-CAM explainability.
- Applied data augmentation, class balancing, and optimization techniques.
- Deployed real-time inference system using Streamlit.

Hospital Pulse AI — Predictive healthcare intelligence system for hospital stress analysis

- Developed ML-based forecasting models for operational load prediction.
- Designed dashboard interface for real-time monitoring and early alerts.

- Focused on decision-support system architecture.

FlowX — *Traffic intelligence and optimization system*

- Built YOLO-based vehicle detection pipeline for real-time traffic analysis.
- Implemented adaptive signal control and emergency vehicle prioritization.
- Designed system for multi-intersection traffic optimization.

Revibe Lab — *AI-driven innovation platform for sustainable problem solving*

- Developed recommendation-based system for e-waste reuse and innovation ideas.
- Integrated guided workflows and AI-assisted learning modules.
- Focused on accessibility and real-world impact.

SKILLS

Programming: Python, JavaScript, Java, C/C++, SQL

AI / ML: PyTorch, TensorFlow, Scikit-learn, NLP, Computer Vision, LSTM, YOLO

Web Development: React.js, Next.js, Node.js, Flask, Django, FastAPI

Tools & Platforms: Git, GitHub, Docker, AWS (Basics), Streamlit

Core Strengths: AI Engineering, System Design, Problem Solving, Leadership

ACHIEVEMENTS

- **1st Place** – HackBio, IIT Mandi
- **High Commendation** – 21st International Model United Nations (INMUN)
- **Finalist** – IIT Patna Hackathon
- **2nd Place** – Tech Expo, BBD University
- Participated in 50+ hackathons with multiple finalist and top placements.
- Led multiple large-scale tech events as Event Lead.

CERTIFICATIONS

- Machine Learning Using Python – Simplilearn
- Introduction to Generative AI – Google Cloud
- Data Visualization with Python – Great Learning
- Business Analytics with Excel – Simplilearn
- Kaggle Certifications: Machine Learning, SQL, Deep Learning
- Multiple certifications from IITs, IIMs, GDG, and international platforms
